ICD-10 Diagnostic Codes

NOTICE: Cigna® Coverage Policy Change Effective March 15, 2018

Cigna® Coverage Policy #: 0526

CPT® Code: 82306

Description: Vitamin D; 25 Hydroxy, includes fraction(s), if performed

Cigna has issued a Coverage Policy change effective March 15, 2018 for Vitamin D testing. The Policy determines that Vitamin D testing is considered medically necessary for known osteoporosis, known conditions that impact the ability of the body to use Vitamin D and clinical concerns for Vitamin D intoxication and it provides specific covered ICD-10-CM Diagnosis Codes. Vitamin D tests ordered without a covered ICD-10-CM diagnosis code will not satisfy Cigna's medical necessity determination and will not be covered. For Vitamin D testing without a covered Diagnosis Code, Clinical Pathology Laboratories will need to pursue an appropriate Diagnosis Code or, if unsuccessful, convert the billing to the patient or clinic.

Vitamin D is a fat-soluble vitamin obtained primarily through fortified foods or supplements and from dermal (skin) synthesis from exposure to sunlight. The 25-Hydroxyvitamin D (25(OH)vitD) form of the vitamin represents the primary storage pool, and measurements of 25(OH)vitD inform about the body's overall vitamin D status. The 1,25-Dihydroxyvitamin D (1,25(OH)2vitD) represents the active form of the vitamin, responsible for calcium metabolism including bone health. 1,25(OH)2vitD also regulates the expression of genes in many other tissues including immune cells, muscle, vasculature and reproductive organs.

According to the policy, serum 25(OH)vitD should be assessed in persons at risk for Vitamin D deficiency or insufficiency. Vitamin D deficiency may result from:

- inadequate exposure to sunlight or intake of Vitamin D
- reduced absorption of Vitamin D (e.g., malabsorption syndromes)
- medications or disorders that affect the metabolism of Vitamin D and phosphate (e.g., glucocorticoids, chronic kidney disease)
- resistance to the effects of Vitamin D

Causes of malabsorption may include:

- diseases of the gallbladder, liver, or pancreas
- some conditions such as cystic fibrosis
- damage to the intestine from infection, inflammation, trauma, or surgery
- parasitic diseases
- certain congenital defects such as biliary atresia

Another reason to measure serum 25(OH)D is in hypercalcemic individuals when there is a suspicion of Vitamin D intoxication due to over-the-counter drugs, fortification errors, or excessive dosing.

The Policy specifies covered ICD-10-CM Diagnosis Codes with a note that the list of codes may not be all-inclusive and that deleted codes and codes which are not effective at the time of service may not be eligible for reimbursement. The laboratory has summarized the Cigna codes as follows:
